DATE: **2018.05.30 UPDATE**
From: Sid (Christopher Flores)
RE: Current Loading Schedules for Master Data & Surveys (Samurai Pro)

Process:

The below steps are first done in Sandbox to resolve any issues that may come up. If the updates are successful, L2 Team will proceed to perform the same steps in Production.

1.) *Export* the existing tables in Data loader to have a back-up copy in case any issues are encountered and a rollback needs to be performed.

Tables to extract:
- Account
- User
- ebMobile__UserMapping__c

2.) Add the required fields to each file and remove the unnecessary/blank columns
3.) Make sure that the fields follow the proper format for Data Loader

4.) For the **User MST** and **Store MST** files, new Users and Stores are saved on a separate file from existing Users and Stores. This is to ensure that the records will be processed correctly.

a) The file with New items will be sent to data loader using the *Insert* function
b) The file with the Existing items will be sent to data loader using the *Update* function
c) Once the updates have been completed in Data Loader, export a copy of the three tables.
d) Cross check the data from the latest extract with the file sent by business to verify if the data is correct.

5.) For the **User-Store Mapping MST** file, L3 Team advised that an initial load should be done following the below steps.

a) *Delete* the existing data using Data Loader
b) *Upload* the new **User-Store Mapping MST** file using Data Loader
c) Cross check the data from the latest extract with the file sent by business to verify if the data is correct.

Fields to check for each file:

User MST:

L3 Team advised that the **User Name** and **User Code** fields should have the same value.
Remember to add a column for User Code on the User MST file and copy the value from the Username field.

To find the *ProfileId* and *UserRoleId* fields:
- Extract the *Profile* and *Userrole* tables from workbench/data loader
- From the User MST file, do a vlook up from the Role and Profile field to get the corresponding *ID* from these tables.
- Paste the ID results as values to the corresponding columns

To find the *ManagerID* field: Export the *User* table (fields you need are ID and Username)
- Create a new column for *ManagerID* on the Store MST file.
- From the Store MST file, do a vlook up from the *Username* field to get the corresponding *ID* from the *User* table.
- Paste the ID results as values to the OwnerID column

Field Name	Sample Format for Data Loader
TimeZoneSidKey	Asia/Tokyo
ProfileId	00e41000001m1zHAAQ
UserRoleId	00E41000000UlQpEAK
EmailEncodingKey	UTF-8, ISO-8859-1
LocaleSidKey	ja_JP, en_US
LanguageLocaleKey	ja, en_US
ebMobile__CountryCode__c	JPN
ManagerId	00541000002XXPWAA4

Store MST:

Sales Route field should have the same value as Username and User Code. Add a column for sales route on the Store MST file and copy the value of the username.

To find the Account Owner field on the Store MST file:

- Export the *User* table (fields you need are ID and Username)
- Create a new column for *OwnerID* on the Store MST file.
- From the Store MST file, do a vlook up from the *Username* field to get the corresponding *ID* from the *User* table.
- Paste the ID results as values to the OwnerID column

Field Name	Sample Format for Data Loader
OwnerId	0054100000368OmAAI
ebMobile__CountryCode__c	JPN

User-Store Mapping MST: File to be uploaded as sent by business. No changes need to be made to the fields.

RE: Current Loading Schedules for Master Data & Surveys (Samurai Pro)

Master Data Set Up

Monthly master data files are usually sent by business during the third or last week before month end. These are first uploaded in Sandbox before they are uploaded to production on the last day of the month.
The update in Production is done after business hours. L3 Team mentioned that the updates can be done between 7pm-2am JST however, we should never do updates after 2am JST as the data would not be captured in the batch jobs.

The following files are shared by Shikimori-san shikimori.h@pg.com for master data updates and are loaded in order:

- **User MST** – list of all users to be updated/inserted for the next month
- **Store MST** - list of all Accounts to be updated/inserted for the next month
- **User-Store Mapping MST** – list or User to Store Mapping to be updated/inserted for the next month

Load schedule for Production: Last day of the month between 7pm-2am JST

Survey Set Up

SDO users usually send separate request for the survey set up and we also have a monthly call to discuss the survey set up with Kuramori-san.
Some surveys have new items/questions that need to be created while others use the same set up every month, depending on the business request. Aside from the monthly requests, we also receive ad hoc requests for survey set up.

Once we receive the requests, the surveys are first set up in Sandbox before month end and once done, we get the SDO users to check if all the details are correct before creating the surveys in Production. Once the surveys are available in Production, they are initially set as inactive. We activate the surveys after business hours on the last day of the month, or on a specified date when they should be activated.

We have the below survey types that are set up every month.

Survey type
PO
Other Photo
POSM
FMOT contest
Periodical Rounder
PE

Load Schedule for Production: Surveys are activated on the last day of the month, after Japan business hours.
