Overview

RTDC Data Integration is the interface wherein Key Performance Indicator (KPI) is being processed. These KPIs that are used by business were like metrics to show how the store is performing based on the products per category. They provide grades to see if the performance of the product is enough to the demand of the store.

Before, L2 Team uses third party analytic application called “Knime” to process the raw data from Infosys team thru **Axon** extract method. Due to the decommissioning of this team, Axon raw data supplies to S-Pro was stopped.

Now, new RTDC was rebuild and re-established. This document will share the new processes from how to prepare the raw data up to uploading in SFDC systems.

Scheduling of Tasks

RTDC needs to be performed in a weekly basis **every Tuesday of each week**.

The RTDC data is uploaded on a category level, store RTDC data and user RTDC data are processed by batch at night, which means if users try to roll up the value on the mobile by themselves to check the store RTDC value and user RTDC value immediately after the upload the category RTDC data in business hour, they may not be match to the category RTDV value at that moment.

Task	Schedule
Preparation	During business hours
Upload (UAT) - Optional	During business hours
Upload (PROD)	After business hours

Table 1.0: Schedules of the tasks

Preparation and Upload Processes

This is the section where the actual step by step processes are going to be pointed out from receiving the raw data to preparation and up to upload in SFDC.

A. Extraction

Axon files are being extracted in a weekly basis by Axon Team and OM/L2 Team separately. RTDC requires two different files to be completed. These are the below:

1. **SProRTDCRaw Extract** – This file is being extracted by Axon Team automatedly and will be sent to L2 Team's P&G email account. Note that this file will be the main file to be used in the RTDC upload. This file contains the following data:
    - Site ID
    - Category (Lang)
    - Ships in GIV Customers Sales YA
    - Ships in GIV Customers Sales
    - Ships in Unit Customer Sales YA
    - Ships in Unit Customer Sales

To download the file, just click the download link like the highlighted part of the image below.

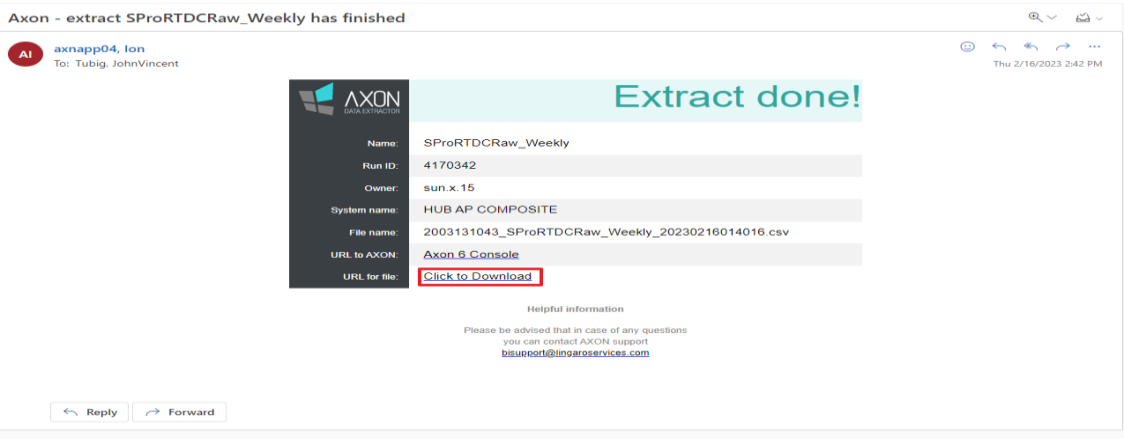

Image 1.0: Sample Extract sent by BI Ops Team to L2 Team

2. **SProRTDCRaw_MonthlyTarget Extract** – This is the file where the target values and volumes for the stores are being populated. It will be extracted manually by OM through Axon application and will be shared to L2 Team via S-Pro SharePoint site for each month. The OM will upload the file every end of the month. This file contains the following data:

   - Value Target
   - Volume Target

   In the future, OM plans to transition the extraction to L2 Team once the access to Axon Application has been granted.

B. Preparation

After securing the two extracted raw files, L2 team needs to process these manually to be uploaded in SFDC. Below is the step-by-step process in how to prepare the files.

API Name (SFDC)	Field Name (AXON)
AccountNumber__c	Site ID
CategoryName__c	Category (Lang)
RTDCValueYA__c	Ships In GIV Customer Sales YA
RTDCValueTarget__c	Value Target/Ships In GIV Customer Sales IYA
RTDCValue__c	Ships In GIV Customer Sales
RTDCVolumeYA__c	Ships In Unit Customer Sales YA
RTDCVolumeTarget__c	Volume Target/Ships In Unit Customer Sales IYA
RTDCVolume__c	Ships In Unit Customer Sales

Table 2.0: API Names from SFDC with the equivalent Field Names from Axon

IMPORTANT: The files are dealing with a huge number of data and *MS Excel* is prone into crashing. It is very important to always **SAVE** and **check the COUNT** in every move all throughout the process.

1. In the **SProRTDCRaw Extract**, update the below field names into API names from SFDC.
   - Site ID
   - Category (Lang)
   - Ships in GIV Customer Sales YA
   - Ships in GIV Customer Sales
   - Ships in Unit Customer Sales YA
   - Ships in Unit Customer Sales

2. Filter out and remove unregistered and inactive stores in the existing system data using *VLOOKUP* function. A fresh export from SFDC is needed to see the correct data.

3. Filter out **CategoryName__c** with a category value ｷｯﾁﾝｸﾘｰﾆﾝｸﾞ and change to ﾃﾞｨｯｼｭｹｱ. Do the same thing in **SProRTDCRaw_MonthlyTarget Extract** under **Category (Lang)** field.

4. Concatenate **AccountNumber__c** and **CategoryName__c** to have a unique field as a reference in **SProRTDCRaw Extract**. Do the same thing in **SProRTDCRaw_MonthlyTarget Extract** for Site ID and Category (Lang).

5. Perform *VLOOKUP* function to catch the **RTDCValueTarget__c** and **RTDCVolumeTarget__c** using the unique field reference from both files. The unique field can be deleted after.
6. For the **#N/A** results, change the value to **0**.
7. Add **AccountID__r:ebMobile_ERPAccountNumber__c** field. Copy the data from **AccountNumber__c** as the default values.
8. Add **PeriodType__c** field with default value of "**MTD"**.
9. Add **Period__c** field with default value of "**YYYY-MM-01T12:00:00.000**". Current year and month are to be used.
10. Add **ExternalId__c** field. For the value, concatenate the **PeriodType__c, AccountNumber__c, CategoryName__c, Period__c (remove the time in the period value)** using "_" as the separator**.**

    Sample value: **MTD_2000587780_エアケア_2022-04-01**

11. Double check the file for any garbage characters or incorrect counts. The final output of the file should be like the below image.

	A	B	C	D	E	F	G	H	I	J	K	L
1	AccountID_r:ebMobile_ERPAccountNumber__c	AccountNumber__c	CategoryName__c	RTDCValue__c	RTDCValueYA__c	RTDCVolume__c	RTDCVolumeYA__c	RTDCValueTarget__c	RTDCVolumeTarget__c	Period__c	PeriodType__c	ExternalId__c
2	2000597228	2000597228	柔軟剤	319060	1557816	468	2400	2448012034	3000075.12	2023-02-01T12:00:00.000	MTD	MTD_2000597228_柔軟剤_2023-02-01

Image 2.0: Sample final output of the processed file

C. Upload

Once the preparation has been completed, L2 Team needs to do the upload in **UAT** (optional) first before proceeding to **PROD**. Though the two environments don't have the exact data, RTDC is needed for both. Below are the methods to be used in uploading the data in SFDC for both environments.

- ✓ *Platform*: **Salesforce Inspector (recommended) / Data Loader**
- ✓ *Object Name*: **CategoryDetailKPI__c**
- ✓ *Actions*: **Insert / Update**

IMPORTANT: Due to the huge number of data, upload process is normal to take a long time (2-4 estimate time frame or longer depends on the device and connection). Just keep the device up and connected to the internet to avoid timeout error.
In the table below are the expected results for the upload. All record should state successful to complete the upload.

Status	Error	Comments
Successful	N/A	N/A
Failed	Duplicate	This is a common error that may encounter; Get the duplicated IDs and perform Update for the existing records
Failed	INVALID_FIELD: Foreign key external ID	This error occurs when the store is not registered in the application; Nothing to do with this as unregistered store are not part of the RTDC

Failed	Unknown	For any unknown error, report to SLM and eBest Team

Table 2.1: Expected results for the upload

D. Post-Upload

After the upload has been successfully completed. There are still few items needs to perform. Such as:

1. Randomly check uploaded records in *Workbench* if the data are showing correctly.
2. Update **Sales Data MTD Till** in SFDC

   NOTE: If this field has been updated first prior to Lucky 7 KPI task, no need to update it anymore.

   SFDC > **Setup** > *Search* in *Quick Find:* **Custom Settings** > *Click* **Manage** beside **eBest SFA Setting** > *Edit* > *Set* **Sales Data MTD Till** as **YESTERDAY DATE**

3. Send Email to share the results of the weekly RTDC.

   To: 'Nancy Zhang' yanfang.zhang@ebestmobile.com; 徐建文 jianwen.xu@ebestmobile.com; 'Sun, Xiaoli' sun.x.15@pg.com; Tubig, John Vincent Sunga john-vincent.sunga.tubig@dxc.com

FAQs

1. Is it ok to do the upload in PROD during business hours?
   - Only if asks by the situation though it is not recommended. There could be an impact with the data upon roll up in the application. It is better to do the upload in PROD after Japan business hours.
2. Are we going to stop the Lucky 7 KPI process every Tuesday?
   - No, S-Pro needs both.
3. Is it ok to upload with lucky 7 KPI in the same time frame if performed by different task owners?
   - Yes, both tasks are using different objects with no connection with each other.
4. Where can I find the upload monthly file in the S-Pro SharePoint site?
   - Through this link:

     https://pgone-my.sharepoint.com.rproxy.goskope.com/personal/tubig_jv_pg_com/_layouts/15/onedrive.aspx?id=%2Fsites%2FS%2DPro123%2FShared%20Documents%2FGeneral%2FRTDC&listurl=https%3A%2F%2Fpgone%2Esharepoint%2Ecom%2Erproxy%2Egoskope%2Ecom%2Fsites%2FS%2DPro123%2FShared%20Documents&viewid=812de08a%2D6932%2D4aa0%2Db8cd%2D947da93b5d02
