1.0 Overview:

This document lists the common issues encountered in Samurai Pro regarding the sharing list updates of PO surveys and PO files. Issue investigation is done on a case-by-case basis by the L2 team through Incident tickets raised by the business. L3 team significantly helps determine the root cause of the issue and apply permanent fixes as needed.

2.0 Current Process Scenarios

Below are the current process scenarios for the update of the sharing list for PO Survey and PO File.

Scenario	Object	Sharing List Remaks
Zakka SDO creates PO survey	PO Survey	Every Zakka KAMs can view the POs whose CHQ is covered by them in the user mapping Zakka KAMs can't view Electro POs
Zakka KAM edits PO survey	PO Survey	KAM has access to view CHQ PO of Zakka Zakka KAM can't view CHQ PO of Electro
KAM clicks assign to SV button	PO Survey	The Zakka SVs which are under the CHQ of Zakka should have edit access for the CHQ PO of Zakka
	PO File	The other Zakka KAMs which are under the CHQ of Zakka have edit access for the PO file The Zakka SVs which are under the CHQ of Zakka have edit access for the PO file
Zakka SV assigns PO survey	PO Survey	SV has access to view CHQ PO of Zakka
SV clicks approve button	PO Survey	The FIKS MDSs which are under the CHQ of Zakka should have read access for the CHQ PO
	PO File	The FIKS MDSs which are under the CHQ of Zakka have read access for the PO file
Zakka KAM re-assign PO	PO Survey	The sharing list of PO won't be updated
Upload PO file whose effectivefrom is later than today	PO File	The other KAMs which are under the CHQ have edit access for the PO file The SVs which are under the CHQ have edit access for the PO file
Add new user mappings: Add a new Zakka KAM Add a new Zakka SV Add a new Zakka MDS Run DealUserMappingBatch Run UMForFileShareAccountGroupBatch	PO Survey	The new Zakka KAM has edit access for the PO of Zakka The new Zakka SV has edit access for the PO of Zakka The new Zakka MDS has read access for the PO of Zakka
	PO File	The new Zakka KAM has edit access for the PO file of Zakka The new Zakka SV has edit access for the PO file of Zakka The new Zakka MDS has read access for the PO file of Zakka

3.0 Common Root Causes

Below is a list of consolidated root causes why users are missing from the sharing list.

Affected Objects	Root Cause	Remarks	Solutions
PO Survey PO File	During the processing of the sharing list, the following **conditions** might ***not*** have been met: • User is Active (or maintained) • User Mappings are active for the account group (or maintained) • User Code is maintained correctly on User object. • Company of user is maintained correctly on User object. • TeamType has been maintained for Store, User, and User Mapping. • Effectivity dates of the objects are still valid.	DealUserMappingBatch is used to process the sharing list of the PO and PO file and generate the task. Upon job run, when the said conditions are not met, the batch job will not process the user mappings into the sharing lists. Additionally the batch job will only process the sharing list of users with user mappings created or updated within the current day. If the user mappings aren't updated recently, the batch doesn't process them anymore and that's why mappings are still not added on the sharing list even after correcting the conditions which were not met. It is important to do a user mapping refresh every time there are corrections on the said conditions.	The mentioned conditions must be met.
PO Survey	The PO was created before the user was added at the user mapping, then user was changed into the owner of the of the object manually.	The batch doesn't add the user who is the owner of the PO into the sharing list.	L2 to manually add the users to the sharing list of the PO Survey.
PO Survey PO File	User Mappings are not uploaded in the correct window time.	The batch is scheduled at 2:00 JST, it can't process the user mapping data which is uploaded between 2:00 - 9:00 JST	L2 to manually add users to the sharing lists of both the PO and the file.

© Copyright 2024 DXC Technology Company. All rights reserved. 0XX-0000XXX. February 2024

SFA File PO File	The file was uploaded after KAM assigned the PO to SV.	The “Assign to SV” button triggers sharing list update for SVs. Unless the user mappings are refreshed, the file won’t be shared to SVs.	L2 to manually add users to sharing list of SFA file.
SFA File PO File	The account group KAM is not the owner of the file (originally uploaded by other KAM).	Unless the user mappings are refreshed, the file won’t be shared to the owner KAM.	L2 to refresh the user mappings.
PO survey PO File	PO survey is not yet “submitted to KAM”.	KAM, SV and MDS will not be added on the sharing list.	SDO to click the “submit PO to KAM” button.
PO survey PO File	PO survey is not yet “assigned to SV”.	SV and MDS will not be added on the sharing list.	KAM to click the “assign PO to SV” button.
PO survey PO File	PO survey is not yet approved by SV.	MDS will not be added on the sharing list. (HP and FIKS accordingly).	SV to approve PO.
PO Survey	The PO was created before the user was added at the user mapping, then user was changed into the owner of the of the object manually.	The batch doesn’t add the user who is the owner of the PO into the sharing list.	L1 to manually add the user to the sharing list.
PO Survey	Bug: POs are only shared to master SVs.		Bug fix done by L3.
PO Survey	PO was approved in Salesforce Classic mode, instead of Salesforce Lightning mode.	Finial fields are not automatically populated.	Previously: L2/L3 to manually fill the finial fields using the data in the draft fields. Currently: Logic has been changed by L3. Finial fields are now automatically populated even when PO is approved in Classic mode.
PO Survey	There is no content added in the Priority Orders or PO questions.	PO survey tab is visible to the user but there are no visible Yes/No answer options.	SDO or KAM to add content to the Priority Orders.

4.0 Related Incidents

Below is a list of common issues reported by the users.

1.1 MDS cannot view PO survey on mobile

Related Record: RITM1625757 (Similar Case: RITM1611476)

Details: User cx08025476015@cerebrix.jp cannot see the PO Survey in all stores he is in charged.

Root Cause: User has different Company Name (P&G Japan and not HP). This is the reason why he was not added on the sharing list. L2 just changed the “Company Name” into “HP” on 2020-02-10. HP Approval status are all “Approved”. However, when checking the “Last Modified Date” all were approved on January (before we changed company name). It is expected that user won’t be included on the sharing list of the POs since the trigger of adding users on the sharing list is when SVs set status to approved.

Workaround: L2 refreshed the user mappings for the user to trigger sharing list addition. This is because the batch job will only process the sharing list of users with user mappings created or updated within the current day.

Related Record: RITM1632421

Details: PO Survey tab not showing to the store マツモトキヨシエコール?リラ店 in S-Pro app. Affected user: cx08089269429@cerebrix.jp | Affected Store: 2002549540

Root Cause: Team Type was blank for the user mapping record. This is the reason why user was not included on the sharing list.

Workaround: L2 team updated the team type of user mappings and refreshed user mappings accordingly.

Related Record: INC4666247 (Similar Case: INC4564840)

Details: PO Survey tab not displaying to user za214md@icloud.com.

Root Cause: Upon checking records, the user za214md@icloud.com is not on the sharing list of the affected PO because he is not currently mapped on the account group.

Workaround: L2 team performed user mapping maintenance accordingly.

Related Record: RITM1632421

Details: Igarashi -san reported that after updating S-Pro to v 7.1.1, a PO Survey tab for December is not showing in the app.

© Copyright 2024 DXC Technology Company. All rights reserved.

Root Cause: The problem was caused by the PO survey not having team type on the backend. L2 have checked it and provided team type to all PO surveys effective that day ticket was raised. New POs that will be created in the future should be fine, issue is only encountered by those created before Sprint 11 was released.

Workaround: L2 team updated the team type of PO Surveys accordingly.

Related Record: **INC11599866**

Details: The PO Survey tab is not displayed to users.

Root Cause: The issue is due to SV approving the PO in Salesforce Classic mode instead of Salesforce Lightning mode. This caused the finial fields in the backend to not be automatically populated, and this is thy the PO is not visible on the mobile.

Workaround: L3 team manually assigned the value of draft fields to the finial fields in the backend.

1.2 MDS cannot view answer options of PO survey on mobile

Related Record: **INC10987689**

Details: Yes/No options are not displayed to the users.

Root Cause: Priority Order does not have content. A section that does not have any content will be hidden on the mobile app. This is the reason why the Yes/No options are not displayed to the users.

Workaround: The SDO or KAM in charge of the PO is to add content to the related priority order.

1.3 MDS cannot access PO file

Related Record: **INC4427964**

Details: User can't access PO attachment. User name: m-igarashi@fiks.co.jp | CHQ: くすりの福太郎

Root Cause: User m-igarashi@fiks.co.jp is not mapped to the CHQ 3000000102 so it is expected that he's still not on the list.

Workaround: L2 team performed user mapping maintenance.

© Copyright 2024 DXC Technology Company. All rights reserved.

1.4 SV cannot access PO survey

Related Record: **CHG0211336**

Details: PO not sharing to non-master SVs

Root Cause: Bug: POs are only shared to master SVs

Workaround: L3 performed bug fix through change record.

1.5 SV cannot access PO file

Related Record: **INC4592037**

Details: Regarding this ticket, the affected account group is HC コナン. They are not able to access the below PO attach files. Sample Users: y-saitou@fiks.co.jp & i-matsuo@fiks.co.jp

Root Cause: The SVs are on the sharing list of the PO but not on the sharing list of the file. This is because the file was uploaded after KAM assigned the PO to SV. The file should be uploaded first before the status is set as "Submitted to SV".

Workaround: L2 team performed manual sharing of the users for the PO file.

1.6 KAM cannot access PO file

Related Record: **INC4401943**

Details: When Fukuda-san and Sugawara-san tried to open PO files, access error occurs.

Root Cause: Support miss on maintenance of User CHQ Mapping File. Mapping was uploaded outside the time window [9:01-21:59 JST]. Thus, the mappings were not processed by the batch job.

Workaround: L2 team updated refreshed user mappings accordingly
Related Record: **INC4512077**

Details: User sugawara.t@pg.com who is in-charge of VIVA was able to attach the file. However, when the user tries to delete, it says "no access" message.

Root Cause: The DealUserMappingBatch is used to process the sharing of the PO and PO file for the user which is new for the CHQ in the user mapping. In this case, the PO and PO file were created before adding the user into the user mapping, and then the user was changed to the owner of the PO manually, the batch doesn't add the user who is the owner of the PO into the sharing list of the PO file.

© Copyright 2024 DXC Technology Company. All rights reserved.

Workaround: L2 team updated refreshed user mappings accordingly.

Related Record: **INC4789955 (Similar: INC5491322)**

Details: A user has encountered the error below when trying to upload and update a PO PDF file. Affected PO #: A-0006663 | Affected user: Iguchi Naoki (iguchi.n@pg.com)

Root Cause: Upon checking, user Ayaka Kawasaki is the owner of the file and it's not shared with Iguchi Naoki. She created it on 12/10/2019 9:19 AM. Also, the status PO is still "Submitted to KAM" so the trigger to share with the account group is not yet triggered. Since Ayaka Kawasaki originally uploaded the file while in the said status, it wasn't shared on Iguchi Naoki.

Workaround: "Assign to SV" triggers the sharing list of PO file to be updated. KAM will be added accordingly for the PO file after. ***Note: CR is expected to be raised to change the logic into updating the sharing list of PO file regardless of status***

1.7 KAM cannot delete PO file

Related Record: **INC4608047 (Similar Case: INC5274274)**

Details: Sugawara-san cannot delete file attachment (but Okada-san can).

Root Cause: the "Delete button" not only depend on its access on the file but also the Custom Permissions per profile.
Technically, the even though the user tachibana.r@pg.com is the owner and is allowed to delete the file, she cannot still delete if the "Delete Button" do not appear. Her profile is Japan Field Sales which do not have deletion button, comparing this to okada.y.2@pg.com which has JP SDO Admin profile. Delete button does appear on her profile.

Workaround: If the user is the owner of the file record, the user can delete all the attachment files. If the user is not the owner of the file record, the user can delete only the attachment file uploaded by himself. Business might have been confused regarding the SFA file (which they don't have delete button) and attachment files (files under SFA file object).

1.8 Email notification not received by user

Related Record: **INC5319429**

© Copyright 2024 DXC Technology Company. All rights reserved.

Details: April PO Survey approval mail for several CHQs were not sent to user. Affected User: m-tani@cerebrix.jp. Some SPOC in charge SVs have no Approval rights. Affected User: t-tachibana@cerebrix.jp (No approval rights for 2001455009 ＤＣＭ-Zakka) k-ikeda@cerebrix.jp (No Approval rights for 2000644144 平和堂-Zakka)

Root Cause: The PO survey has been “Submitted to SV” before the user mappings were created. This is the reason why the notification was not received, because it is sent via trigger. The affected users have no user mapping recorded on production.

Workaround: L2 team performed user mapping maintenance and refresh.

Related Record: **INC5319637**

Details: The April PO approval request mail is not being sent to SPOC. Also, the PO can't be viewed in the PO list in Salesforce. When the SPOC accesses the link above, it says no access right. The PO also can't be viewed from the PO list.

Root Cause: User is not added on the sharing list of PO Survey because he is not mapped to the CHQ

Workaround: L2 team performed user mapping maintenance.

1.9 Cannot Start Visit

Related Record: **INC9169501**

Details: The Electro User cannot start a visit from the Application. Whenever the user click the Start Visit icon, it just refreshes the page.

Root Cause: The Team Type was accidentally changed when updating the user object.

Workaround: Re-upload the file from the user object and change it to the correct team type.

Note: Take note also that with this kind of issue, you can also check if there are no Surveys existing for the said user.

1.10 Store not Visible

Related Record: **INC9216042**

Details: The MDS users reported that the stores are not appearing to their applications.

Root Cause: The UST Mapping was deactivated.

© Copyright 2024 DXC Technology Company. All rights reserved.

Workaround: The UST Mapping was reactivated.

Note: If the store is not appearing, you can check first if there is an existing UST Mapping for the user and the store. If there are no existing user/store, kindly create one. And if it is deactivated, reactivate it.
