Overview

The purpose of this document is to outline the Monthly Master Data (MST) Loading Process to include the necessary updates related to the deployment of AI Routing in Samurai-Pro. It is necessary to upload these files in chronological order. **Note that this process should be completed in PROD before 20:30 JST** because some monthly processing batches start at this time. If there are any delays, please inform AI Engine Team in advance.

Process Before Month End

The following steps should be done before the month end period agreed with business. This is usually done **within 2-4 working days before the end of the month.** Kindly refer to the *MST Data Upload Schedule* file provided by business for additional details.

Commented [ON1]: Within 2-4 working days before end of month

1. **User Object**

   i. L2 Team will need to extract the list of **new Zakka MDS** users from the User MST provided by business. This should include **only Zakka MDS** users tagged as **create**.

   Filters: Team Type = Zakka; Profile = MDS, SV

   Commented [FCDJ2]: Business required SV users to be included in AIRP processing as of May 2022

   ii. Note that JH(ジョイフル本田) for FIKS users and follow-call users don't use AI-RP. Therefore, please remove users who don't have *geo information* (latitude and longitude) details in in UserMST when L2 uploads. Please also remove users with name contains as follow call Name of user contains "フォローコール"

   Commented [FCDJ3]: Filter criteria added by Sun 3/7/2022

   We need to add JH users in UserMST at the end of month. we need to upload only new users except JH users in UserMST during AI-RP upload.

   iii. All details provided in the User MST, including the below 3 fields should be uploaded to the system

   Commented [FCDJ4]: Reconfirm if this should be done only for new users

   Commented [FCDJ5R4]: Sun (P&G OM) confirmed that this is correct

   - TransportationMethod__c
   - USERGEO__LATITUDE__S
   - USERGEO__LONGITUDE__S

Note: If L2 doesn't upload these 3 fields, MDS can't use AI-RP capability in S-Pro because AI-Engine can't create visit routes.

Note: Business advised that JH(ジョイフル本田) for FIKS users and Follow-call users don't use AI-RP. Therefore, they don't have geoinformation. Given this, it is expected that for some Zakka MDS users, the 3 fields will be set as blank on the User MST

2. **Account Object**

   i. L2 Team will need to extract the list of Accounts that are tagged as ***create*** and are ***owned*** by Zakka MDS users from the Store MST provided by business.

ii. Accounts **Owned** by **follow call** users and Accounts with Monthly Call Target = 0 should be **excluded** from the upload.

iii. If new accounts are linked to users who don't have geoinformation, L2 team needs to notify DataHub team for them to populate these details.

iv. **Upload *only new account information*** for Zakka MDS users on the Account object.

v. **IMPORTANT:** Please notify AI Agency Team via email once the accounts have been uploaded. They will need this information to add *stay time* information for new accounts to be used on the UST2 upload.

Commented [FCDJ6]: Criteria was added by Sun on 3/7/2022

Commented [ON7]: Staytime information

Commented [ON8]: If new account don't have geoinformation, Pls notify DataHub, Inaba-san to create GPS as of Oct'21.

3. **Contact Object**

i. L2 Team will check the Store MST files provided by business and extract the records for new Accounts only.

ii. The default values listed below need to be updated for the new stores on the Contact object.

Field	Default Value
AIEngineUsed__c	TRUE
Probability_staff_in_store_9_12__c	50
Probability_staff_in_store_12_15__c	50
Probability_staff_in_store_15_18__c	50
First Name	自身で設定してください
Last Name	自身で設定してください
Account ID	<based on Account ID from the Store MST file provided by business>

4. **User Store Territory2 object**

i. L2 Team needs to extract only Zakka MDS users from the **User Store Territory (UST) Master file** provided by business. This includes new and existing users.

Use the following filters: Active =TRUE, Profile =MDS, SV Team Type = Zakka

Remove users tagged as *Delete* from the DH file

Commented [FCDJ9]: Business required SV users to be included in AIRP processing as of May 2022

ii. Note that JH(ジョイフル本田) for FIKS users and follow-call users don't use AI-RP. Therefore, please remove users who don't have *geo information* details in UserMST when L2 uploads.

iii. Additional checks below need to be done for the data on the UST MST

Type	Filter	How to check
JH	CHQNAME__C = "ジョイフル本田"?	Lookup CHQName field from the Account object using the Account name field on UST MST.

		• Exclude records for users who are **only** tagged to accounts with CHQNAME__C = "ジョイフル本田" • If users are tagged to CHQNAME__C = "ジョイフル本田" and other accounts, these records should be included on the upload. Regardless if active or not. Note: CHQNAME__C > user geoinformation, if users have geoinformation but are tagged to this CHQ, we can exclude the record from UST2
follow-call	Name of user contains "フォローコール"?	Lookup Name field from the User object using the username name field on UST MST. Exclude records whose name start with フォローコール
Retiring MDS	To be confirmed by AI Agency Team as there is no way to identify users from L2 's side	Data to be provided by AI Agency after update is completed by L2
Closed Stores	Account Name contains "(閉店)"	Filter out Account Names that contain (閉店) from the UST MST file.

Commented [FCDJ10]: Criteria added by sun on 6/20/2022

iv. AI Engine Team will provide a separate file with the below fields

Field	Default Value
PerformanceIndicators__c	<default=0>
ProcDate__c	<default=first date of next month> (ex: Current month=Sep, Input:2021-10-01)
Rank__c	<default=Null>
StayTime__c	<provided by AI-Agency on a separate file>
IsActive__c	Provided by business
NGDates__c	<provided by AI-Agency on a separate file>
NGDays__c	<provided by AI-Agency on a separate file>
FirstCallDate__c	<provided by AI-Agency on a separate file>

v. L2 Team should perform a lookup using the *Account ID* field to prepare the final files for upload

vi. Add above 5 new fields to these users and populate them with the default values listed. Note that only the values for the *StayTime__c* and IsActive__c fields are provided by AI Agency. L2 Team needs to populate the other 3 fields with the default values listed.

vii. Once done, L2 will ***insert*** the new file, including all fields provided on the UST MST, and the 5 new fields to the *User Store Territory2 object*.

(Note to use Insert for all Zakka MDS users)

Note: regardless of new or existed (for AI-RP user on next month, need to upload them as insert. This means that we have 2 records for existed user, but we have different Proc_date)

viii. Export the existing data from UST object and perform steps i-vii above. This includes new and existing users. Once done this file should also be uploaded to the *User Store Territory2 object*.

NOTE: Remove records that are already existing with the same ProcDate__c by cross checking using concatenated key fields.

5. **BEEAPP_MonthlyProcessingSchedule object**

L2 team sets a processing date on this object to identify when the Monthly Processing will be executed on AI Engine side. L2 team should upload a single record to this object on a monthly basis. The details for each month should be based on the *MST data upload schedule* file.

Field	Default Value
Id	<null if new record; existing salesforce ID if this needs to be updated>
ProcDate__c	2021-09-25
IsProcess__c	TRUE

If L2 Team can complete the uploads earlier than the schedule provided on the *MST data upload schedule file*, kindly coordinate with Sun-san and AI Agency Team to confirm if the value for *ProcDate__c* should also be updated.

Commented [ON11]: For monthly processing by AI-Engine, need to upload before 20:30pm because data transferred from 20:30 pm in the system.

Note: In case of emergency: AI-Agency must inform L2 team and request to reschedule a date if AI-Agency figures out that it is impossible to upload data until 8 p.m. of following day

Post-Upload

Once the uploads have been completed, DXC L2 should inform below AI Engine Team contacts about the completion. Sample email is linked below.

Month End Process

The following steps should be done on the **last business day** of the month.

1. **User Object**

L2 will upload the remaining records for Zakka MDS users tagged as update or delete on the *User MST* file provided by business.

Records for KAM and other roles should also be included on the upload, as usual.

*Note: do **not** include the 3 fields which were uploaded to the **User object** on the **Process Before Month End**.*

Commented [FCDJ12]: Reconfirm if the three fields need to be included on the month end update

Commented [FCDJ13R12]: Saito-san confirmed on Feb 24th that there is no need to update the 3 fields on the month end process. To re confirm with Sun

2. **Account Object**

L2 will upload the remaining records for Zakka MDS users tagged as update or delete on the *Store MST* file provided by business.

Records for KAM and other roles should also be included on the upload, as usual.

3. User CHQ mapping Object

L2 will upload the *CHQ Mapping MST* file provided by business following the usual process. No changes to the existing MST process.

4. **User Store Territory object**

L2 will upload the *UST Mapping MST* file provided by business following the usual process. No changes to the existing MST process.

*Note: do **not** include the 5 fields which were uploaded to the **User Store Territory2 object***

FAQ

1. Do we need to update users who are inactive during the AIRP MST Uploading process?
