Lucky 8 data, verifying its integrity, and updating Salesforce settings for performance assessment.

Process Frequency: This process is completed every Tuesday.

Data Source: The data file is provided by the business team.

Key Difference:

- RTDC and Lucky 8 data are stored in separate objects:
    - RTDC data and call KPIs are saved in the Storekpi object.
    - Lucky 8 data is saved in the Storenewkpi_c object (custom object).

Steps:

1. **Download Lucky 8 Data:**
    - Download the data file provided by the business team.
2. **Navigate to Salesforce:**
    - Log in to your Salesforce instance.
3. **Search for Storenewkpi_c:**
    - Use the search bar to locate the Storenewkpi_c object.
4. **Verify Data Integrity (Optional):**
    - Open the downloaded file and review the data to ensure it appears normal and consistent with expected values.
    - You can skip this step if data validation is done elsewhere in your workflow.
5. **Upload Data to Salesforce:**
    - Copy the Lucky 8 data from the downloaded file.
6. **Import Data:**
    - Navigate to the data import section within Salesforce (specific steps may vary depending on your version).
    - Select the Storenewkpi_c object as the target for the data import.
    - Paste the copied data into the designated field.
    - Initiate the import process.
7. **Log Review:**
    - After the import is complete, review the import logs to identify any potential errors or issues that may have occurred during data upload.
8. **Update Custom Setting (Optional):**
    - Navigate to "Setup" within Salesforce.
    - Search for "Custom Settings" and click "Manage."
    - Locate "Ebest SFA Default Settings" and click "Manage" beside it.
    - Edit the settings and find the section labeled "Sales MTD till -> next Monday."

    - Update this setting as needed (likely no action required if automated).
    - Save the changes to the custom setting.
9. **Notify Business:**
    - Once the data upload and setting update (if applicable) are complete, send a notification to the business team.
    - Include a screenshot confirming the successful upload as verification.
10. **Ticket Creation:**
    - Create a ticket (internal tracking system) documenting the completion of this process. This ticket might be used for future reference or auditing purposes.
