Overview

The objective of this document is to align the processes on how to properly maintain the User Object in our Salesforce Organization. It includes common steps on how to work on the data in this object, wherein it also includes some rules to consider.

All about User Object

User Object is one of the most common and high prioritized objects that we used in S-Pro Salesforce Organization. This is where we pile up and maintain our user's accounts and data.

We maintain this object during monthly master data upload or when business team requested us to through normal ticket (it could be FR or INC). We need to maintain the **User** object properly for the system data in the backend to cope up to the current user's data in business side.

How to maintain User Object

Below are the current processes/steps that we follow when maintaining the **User** object.

A. Manual Process in Salesforce Platform

This process is useful when maintaining single record only in the system.

1. Business to provide required data to maintain. Either the action is for create, update, or delete.

	A	B	C	D	E	F
1	黄色箇所アップデートは必須です。他は必要な場合の			986		
2						
3	要確認	備考	ID	UserName	Profile	Role
4	UPDATE		00541000002Yo0p	s-kajitani@fiks.co.jp	MDS Admin	FIKS Admin
5	UPDATE		0054N000004bc02	t-itou@fiks.co.jp	MDS Admin	FIKS Admin
6	UPDATE		0054100000368He	k-hirai@fiks.co.jp	MDS Admin	FIKS Admin

Image 1.0: Sample template provided by business team

2. L2 Team to execute the needed action.

2.1 To Create Action

i. From Salesforce's home page, go to **Setup** and search for **Users** in the *Quick Find* textbox. Click on **Users**.

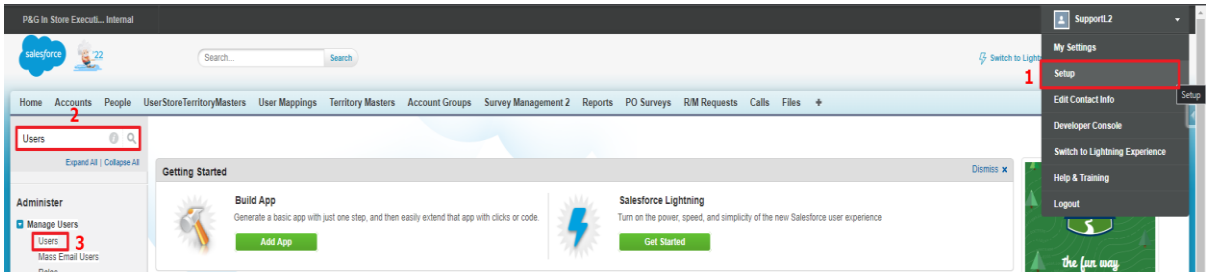

Image 2.0: Step 1 actual view

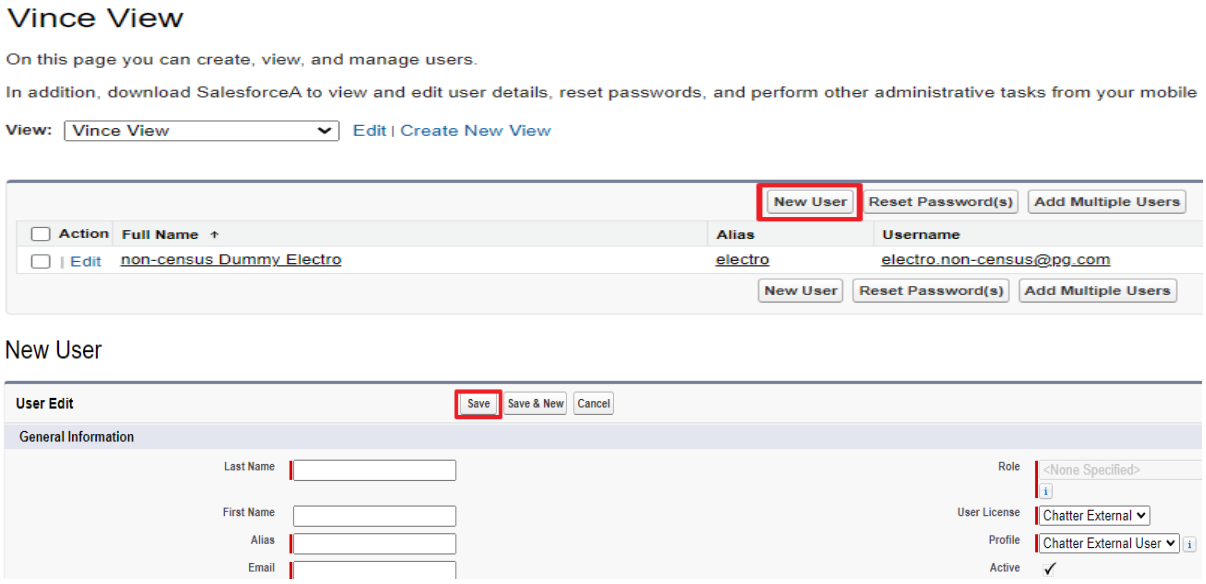
ii. Click on **New User**. Fill up the required fields from the data that business provided and click **Save**.

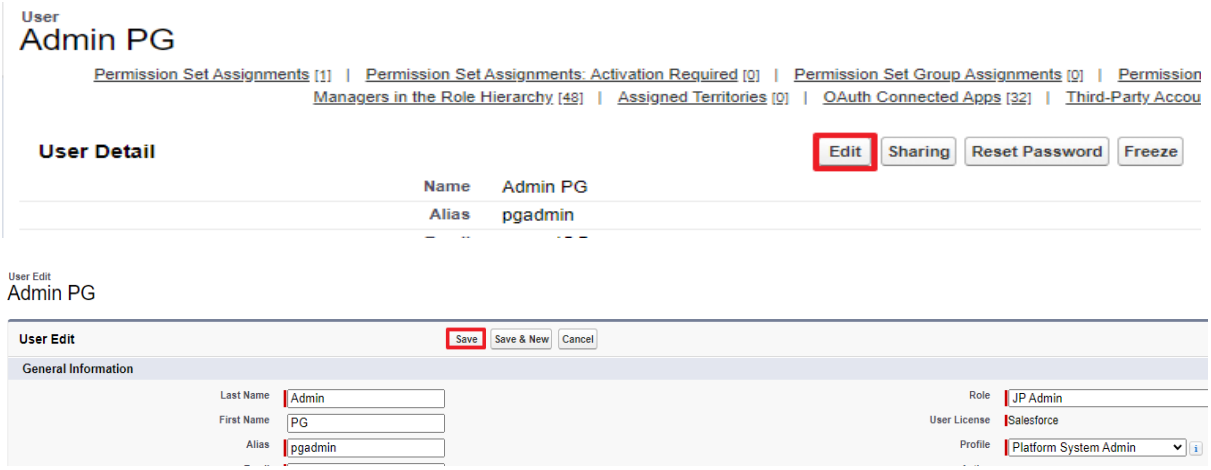


Images 2.1 – 2.2: Step 2 actual views

2.2 *To Update Action*

i. Search for the user to maintain in the salesforce search textbox and open the user's account.

ii. Click on **Edit**, change the data needs to be updated based on the template provided by business. Click **Save**.



Images 2.3 – 2.4: Step 2 actual views

2.3 *To Delete Action*

IMPORTANT: We don't literally delete users who are tagged as **Delete** from business' template. We simply deactivate them in the system.

i. On the **Edit** page (same steps to follow from *2.2 To Update Action*) untick the **Active** checkbox. Click **Save**.

Images 2.5: Step 1 actual views

B. Maintaining User Object from the backend

This process is useful when maintaining two or more records in the system. We can use several **SFDC** extended applications such as *Salesforce Inspector, Data Loader and Workbench*. It's up to the support person in which application he/she prefers, but below is the list of the required fields for the **User** object.

API Name	Data Entity	Default Value	Field Rules
UserName	Text	*Provided by business*	Always the same with *ebMobile__UserCode__c*
ProfileID	ID	*Provided by business*	Mandatory
UserroleID	ID	*Provided by business*	Mandatory
TimeZoneSidKey	Text	Asia/Tokyo	-
LanguageLocaleKey	Text	ja	-
LocaleSidKey	Text	ja_JP	-
Alias	Text	*Provided by business*	Maximum of 8 characters

CompanyName	Text	*Provided by business*	-
Email	Text	*Provided by business*	-
EmailEncodingKey	Text	UTF-8	-
_Name	Text	*Provided by business*	-
CommunityNickname	Text	*Provided by business*	-
ebMobile__UserCode__c	Text	*Provided by business*	Email Format; Mandatory
FederationIdentifier	Text	*Provided by business*	-
ebMobile__LocalTimeGMT__c	Text	(GMT+09:00) Japan Standard Time (Asia/Tokyo)	-
ebMobile__CountryCode__c	Text	JPN	-
LastName	Text	*Provided by business*	-
FirstName	Text	*Provided by business*	-
AreaManagerId	ID	*Provided by business*	-
ManagerId	ID	*Provided by business*	If blank value, confirm with business via L1 team
Team__c	Text	*Provided by business*	-
TeamType__c	Text	*Provided by business*	Mandatory
PG_LicTrack__LicenseSKUMapping__c	Number	121	Mandatory
PG_LicTrack__Country__c	Text	Japan	Mandatory
Country	Text	Japan	Mandatory
TransportationMethod__c	Text	*Provided by business*	Used for AI Engine
UserGeo__Latitude__s	Number	*Provided by business*	Used for AI Engine
UserGeo__Longitude__s	Number	*Provided by business*	Used for AI Engine

Table 1.0: Required Fields in User Object

IMPORTANT: Always check for the field's rules. Most especially the mandatory fields, these fields cannot be blank when maintaining the data in the **User** object as this can cause an issue.

NOTE: Some other errors may encounter upon the process. If happen, kindly report to the Operation Lead. If not available, to the SLM and eBest Team as the last resource.

Post Maintenance Processes for User Object

Once done on maintaining the data in the **User** object, there are still few items we must deal with.

We have to make sure that the below are performed after the data maintenance.

- ✓ Assign **eBest license** to the user created. If user is only for update or re-activate, check if the license is already assigned. If not, assign it so.
- ✓ Add the newly created users to the **MFA Required Permission Set**. If user is only for update or re-activate, check if the permission set is already added. If not, add it so.
